Exercize 1

Predict the values of the parameters using a dataset randomly generated from the exponential distribution of Exp(2). Plot the likelihood function and histogram.

Histogram of the maximum likelihood estimate $\mathbf{2}$

Histogram

3 Estimation

function

$$l(\lambda) = \sum_{i}^{N} \ln \lambda e^{-\lambda x_{i}}$$

$$= N \ln \lambda - \lambda \sum_{i}^{N} x_{i}$$
(1)

$$= N \ln \lambda - \lambda \sum_{i}^{N} x_{i} \tag{2}$$

maximum likelihood

$$\left. \frac{\partial l(\lambda)}{\partial \lambda} \right|_{\lambda = \hat{\lambda}} = 0 \tag{3}$$

$$\frac{\partial l(\lambda)}{\partial \lambda} \Big|_{\lambda = \hat{\lambda}} = 0$$

$$\Leftrightarrow \hat{\lambda} = \frac{N}{\sum_{i}^{N} x_{i}}$$
(4)
